

# National Microbiome Data Collaborative (NMDC)

The NMDC is a *data discovery resource* designed to enable multi-omic microbiome research and accelerate scientific discovery by connecting data, people, and ideas

Recognize and support the research needs and perspectives of the microbiome research community

Promote best practices across the microbiome community, from researchers to funders

Build a microbiome ecosystem that enables scientific discovery and innovation

## Mission

Advance a microbiome data sharing network by **developing infrastructure, establishing data standards, and fostering community building** to address cross-cutting scientific challenges
